Application No.: 10/040,478

## AMENDMENTS TO THE CLAIMS

Please AMEND claim 1, as shown below.

The following is a complete list of all claims in this application.

1. (Currently Amended) A color filter substrate for a liquid crystal display,

comprising:

a transparent substrate;

a plurality of color filters formed on the transparent substrate, each color filter having a

groove formed therein;

a first transparent conductive layer covering the color filter; and

a black matrix formed on the first transparent conductive layer within the groove.

2. (Previously Presented) The color filter substrate of claim 1, further comprising an

organic film formed on the black matrix and filling the groove.

3. (Previously Presented) The color filter substrate of claim 2, wherein the black

matrix has a double-layered structure comprising chrome and chrome oxide.

4. (Previously Presented) The color filter substrate of claim 1, further comprising a

photosensitive film formed on the black matrix and filling the groove.

Application No.: 10/040,478

5. (Previously Presented) The color filter substrate of claim 4, wherein the black matrix has a double-layered structure comprising chrome and chrome oxide.

- 6. (Previously Presented) The color filter substrate of claim 1, wherein the black matrix is formed of an organic material and filling the groove.
- 7. (Previously Presented) The color filter substrate of claim 6, further comprising a second transparent conductive layer covering the black matrix.
- 8. (Previously Presented) The color filter substrate of claim 1, wherein the black matrix comprises a first portion formed between the neighboring color filters, and a second portion formed within each color filter to divide the color filter into a plurality of domains.

9-18. (Cancelled)
